*NANONEX DELIVERS ITS NEW COMPACT NANOIMPRINT TOOL TO
LOS ALAMOS NATIONAL LABORATORIES IN NEW MEXICO*

Princeton, NJ, March 5, 2007: Nanonex Corporation, the leader in nanoimprint solutions and applications with the longest history, announces today the delivery and commissioning of one of Nanonex' new compact series of nanoimprinters – the NX-B100 nanoimprint lithography system to Los Alamos National Laboratories (LANL) in New Mexico.

The Nanonex NX-B100 installed at LANL is a compact, cost-effective and versatile sub-10 nm resolution nanoimprint tool, powered by Air Cushion Press™ (ACP) for excellent imprint uniformity and yield over large area, with a Smart Sample Holder for flexible imprinting of the molds and substrates having arbitrary shape and geometry.

John Pong, Sales Director at Nanonex said the company is delighted that Los Alamos National Laboratories has selected Nanonex to be their nanoimprint lithography solution provider. The NX-B100 imprinter will support the advanced materials R&D activities in the very important nanotechnology research at the national laboratories.

Nanonex also supplied nanoimprint solutions (machines, materials, masks and processes) to customers in USA, Canada, UK, France, Germany, Japan, Taiwan, Korea and Singapore.

About Nanonex Corp.

Nanonex, a pioneer and a leader in nanoimprint, provides a complete line of nanoimprint lithography (NIL) technology solutions including tools, masks, and processes. Nanonex NIL solutions offer sub 10 nm feature resolution, 3D patterning, large area uniformity, accurate overlay alignment, high-throughput, and low cost. Nanonex NIL solutions include all forms of nanoimprinting, such as thermal plastic, uv-curable, thermal curable, and direct imprinting (embossing). Nanonex NIL solutions can meet the needs of a broad spectrum of markets, such as optical devices, displays, data storage, biotech, IC, chemical synthesis, and advanced materials. Visit www.nanonex.com for additional information.
